LL35HEC-CC-350

35 W Constant Current LED driver

- Highly energy- and cost-efficient design
- Efficiency up to 90 %
- Low current ripple, complying with IEEE 1789 recommendation
- Long lifetime up to 100 000 h
- Maximum output voltage limited to 320 V
- Suitable for emergency lighting applications
- Driver protection Class I
- Ideal solution for Class I luminaires, suitable for Class II luminaires too*

* See page 4 for details.

Functional Description

- Fixed constant current output 350 mA.
- Can withstand load fault situations, see page 4 for details.
- Low inrush current.

Mains Characteristics

DC voltage range

Frequency

DC starting voltage

THD at full power

Mains current at full load

Leakage current to earth

Tested surge protection Tested fast transient protection

Nominal rated voltage range AC voltage range

Quantity of drivers per miniature circuit breaker 16 A Type C

Based on inrush current $I_{_{peak}}$	Typ. peak inrush current I _{peak}	1/2 value time, ∆t	Calculated energy, $I_{peak}^{2}\Delta t$
1017 pcs*	4.8 A	50 µs	0. 0008 A²s

*the inrush current is not the limiting factor for the products per MCB, please notice the continous current limitations.

Total continous current of the drivers and installation environment must always be considered and taken into calculations when installing drivers behind miniature circuit breaker. Example calculation of total drivers amount limited by continous current: $n[I_{cont}] = [16 \text{ A } [I_{nom,Ta}] / \text{``nominal mains current with full load''}] \times 0.76$). This calculation is an example according to recommended precautions due to multiple adjacent circuit breakers (> 9 MCBs) and installation environment (T_a 30 degrees); variables may vary according to the use case. Both inrush current and continous current calculations are based on ABB S200 series circuit breakers. More specific information in ABB series S200 circuit breaker documentation.

NOTE! Type C MCB's are strongly recommended to use with LED lighting. Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Information and conformity

LL35HEC-CC-350 LED driver is suited for built-in usage in luminaires. With LL1x2130-SR strain reliefs, independent use is possible too (see the LL1x2130-SR datasheet for details). In order to have safe and reliable LED driver operation, the LED luminaires will need to comply with the relevant standards and regulations (e.g. IEC/EN 60598-1). The LED luminaire shall be designed to adequately protect the LED driver from dust, moisture and pollution. The luminaire manufacturer is responsible for the correct choice and installation of the LED drivers according to the application and product datasheets. Operating conditions of the LED drivers may never exceed the specifications as per the product datasheet.

Installation & operation

Maximum ambient and t_c temperature:

- For built-in components inside luminaires, the t_a ambient temperature range is a guideline given for the optimum operating environment. However, integrator must always ensure proper thermal management (i.e. mounting base of the driver, air flow etc.) so that the t_c point temperature does not exceed the t_c maximum limit in any circumstance.
- Reliable operation and lifetime is only guaranteed if the maximum t_c point temperature is not exceeded under the conditions of use.

Current setting

LL35HEC-CC-350 LED driver features a 350 mA constant current output.

LED driver earthing

- LL35HEC-CC-350 LED driver is a protective Class I device and designed for Class I luminaires.
- If used inside **Class I** luminaires, this LED driver must always have the protective earth cable connected for safety reasons.
- The driver is designed to be used inside Class I luminaires. For usage inside Class II luminaires, the safety of the luminaire shall be ensured through double/reinforced insulation of live parts and through supplementary insulation of conductive parts of the casing, or any conductive parts connected to the casing, as the casing is only basic insulated from the live parts. The earth connector of the driver shall be left unconnected and there shall be no protective earth terminals in the luminaire terminal block to fulfill the requirements of IEC/EN 60598-1 for Class II luminaires. The EMC performance of the driver change when left unearthed, so it is always the responsibility of the integrator to take measures and necessary actions, for example by luminaire design to ensure the assembled luminaire complies with latest EMC standard.

Miniature Circuit Breakers (MCB)

- Type-C MCB's with trip characteristics in according to EN 60898 are recommended.
- Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Lamp failure functionality

No load

When open load is detected, driver limits output voltage according to Uout (max) (abnormal).

Overload

Driver can withstand overload, the LED load will start to blink or the driver won't start when overload occurs. Reliable operation is only guaranteed in specified operational voltage range.

Underload

Driver can withstand underload, the LED load will start to blink when underload occurs. Reliable operation of the driver is only guaranteed in specified operational voltage range.

Short circuit

Driver can withstand output short circuit and after resolving the fault, driver recovers normal operation automatically.

Conformity & standards

General and safety requirements	EN 61347-1
