LL25SE-DA-120-500

25 W **SELV Dimmable DALI-2** LED driver

Product code: 5737

25 W 220 – 240 V 0/ 50 – 60 Hz

- DALI-2 certified LED driver, 1-100 % dimming range
- SELV output protection for safety and flexibility in luminaires
- Amplitude dimming for the highest quality light output
- NFC technology for wireless programming
- Flicker-free output, complying with IEEE 1789 recommendation
- Suitable for emergency lighting use
- Helvar Driver Configurator support
- Ideal solution for Class I and Class II luminaires

Direct Control | SWITCH-CONTROL 2 | NFC | EL | SELV | DALI 2 | 120

Functional Description

- Adjustable constant current output: 120 mA (default) to 500 mA
- Current setting programmable via NFC, DALI or with external (LED-Iset) resistors
- Amplitude dimming technology for the highest quality light in every application
- Suitable for flicker-free camera recording applications
- Latest technology Switch-Control 2 funtionality for easy-to-use intensity control
- Innovative Direct Control technology to support easy luminaire-based personal lighting level control
- Full load recognition with automatic recovery, open and short circuit protection
- Multipurpose terminal LED-Iset/NTC for current setting or overtemperature protection
- Constant Light Output (CLO), adjustable up to 100 000 h (default disabled)

Mains Characteristics

Nominal rated voltage range	220 V – 240 V, 0 / 50 – 60 Hz
AC voltage range	198 VAC – 264 VAC
	Withstands max. 320 VAC (max. 1 hour)
DC voltage range	176 VDC – 280 VDC
DC starting voltage	> 190 VDC
Mains current at full load	0.12 - 0.15 A
Frequency	0 / 50 Hz – 60 Hz
Stand-by power consumption	< 0.5 W
THD at full power	< 15 %
Leakage current to earth	< 0.4 mA
Tested surge protection	1 kV L-N, 2 kV L-GND (IEC 61000-4-5)
Tested fast transient protection	2 kV (IEC 61000-4-4)

Insulation between circuits & driver case

Mains circuit - SELV circuit	Double/reinforced insulation
DALI circuit - SELV circuit	Double/reinforced insulation
Mains circuit - DALI circuit	Basic insulation
Output - Driver case	Basic insulation
Mains and DALI circuit - Driver case	Double/reinforced insulation
Mains input - Ground input	Double/reinforced insulation

Load Output (SELV <60 V)

Output current (I_{out})	120 mA (default) – 500 mA
Accuracy	± 5 %
Ripple	< 1 % [1 at ⩽ 120 Hz

1] Low frequency, LED load: Cree XP-G LEDs

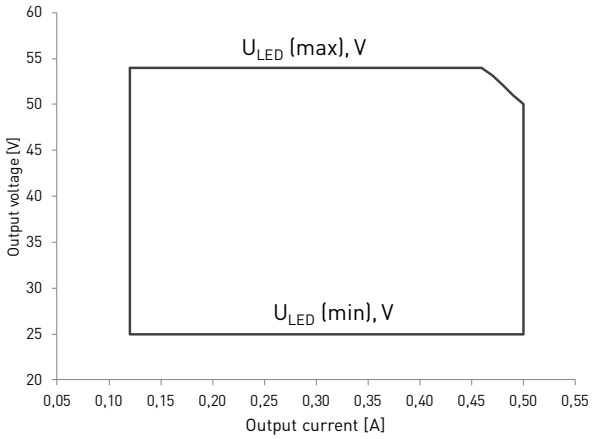
PstLM	< 0.02 [2
SVM	< 0.01 [2

2] At full power, measured with Cree XP-G LED modules.

U_{out} (max) (abnormal)	60 V
EOF_I (EL use)	> 0.98 x output current with AC supply

I_{LED}	120 mA	500 mA
P_{Rated}	6.5 W	25 W
U_{LED}	25 - 54 V	25 - 50 V
PF (λ) at full load	0.83	0.97
Efficiency (η) at full load	75 %	87 %

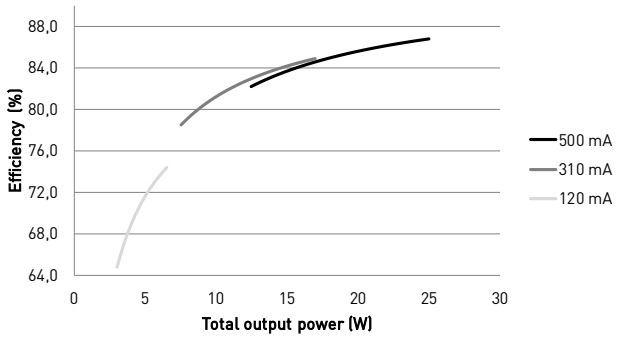
Operating window



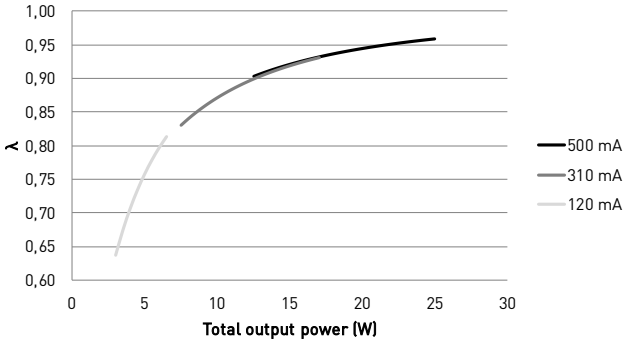
Note: Dimming between 1 % - 100 % possible across the whole operating window

Driver performance

Typical efficiency



Typical power factor



Operating Conditions and Characteristics

Absolute highest allowed t_c point temperature	75 °C
Tc life (60 000 h) temperature	75 °C
Ambient temperature range	–25 °C … +55 °C*
Storage temperature range	–40 °C … +80 °C
Maximum relative humidity	No condensation
Life time (90 % survival rate)	100 000 h, at t_c = 65 °C 90 000 h, at t_c = 70 °C 60 000 h, at t_c = 75 °C

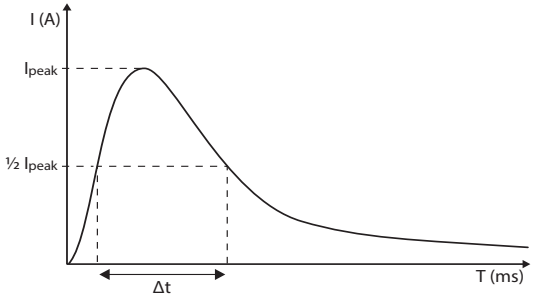
**) For other than independent use, higher t_a of the controlgear possible as long as highest allowed t_c point temperature is not exceeded*

Quantity of drivers per miniature circuit breaker 16 A Type C

Based on inrush current I_{peak}	Typ. peak inrush current I_{peak}	1/2 value time, Δt	Calculated energy, $I_{peak}^2 \Delta t$
92 pcs.	23 A	**117 µs**	**0.0425 A^2s**

CONVERSION TABLE FOR OTHER TYPES OF MINIATURE CIRCUIT BREAKER

MCB type	Relative quantity of LED drivers
B 10 A	37 %
B 16 A	60 %
B 20 A	75 %
C 10 A	62 %
C 16 A	100 % (see table above)
C 20 A	125 %

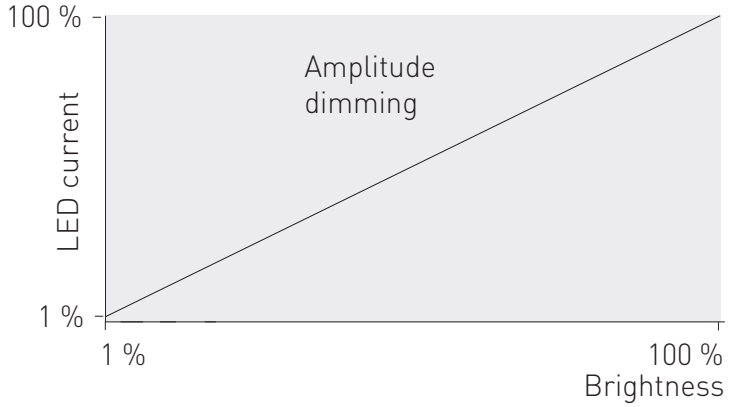


CONTINOUS CURRENT

Total continous current of the drivers and installation environment must always be considered and taken into calculations when installing drivers behind miniature circuit breaker. Example calculation of total drivers amount limited by continous current: $n(I_{cont}) = (16\ A\ (I_{nom,Ta}) / \text{"nominal mains current with full load"}) \times 0.76)$. This calculation is an example according to recommended precautions due to multiple adjacent circuit breakers (> 9 MCBs) and installation environment (T_a 30 degrees); variables may vary according to the use case. Both inrush current and continous current calculations are based on ABB S200 series circuit breakers. More specific information in ABB series S200 circuit breaker documentation.

NOTE! Type C MCB's are strongly recommended to use with LED lighting. Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Amplitude dimming technology

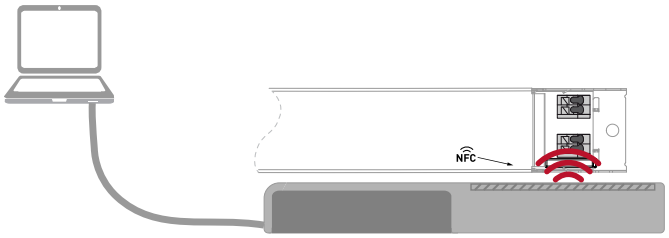


Dimming range	Dimming technology
1 % – 100 %	Amplitude (DC)

LL25SE-DA-120-500 LED driver implements amplitude dimming technology across whole dimming range. Amplitude dimming offers the best available technology for dimming the light output in an accurate and flicker-free way to ensure high quality lighting in even the most demanding situations such as camera recording applications. Amplitude dimming technology complies with IEEE 1789-2015 recommendations of current modulation to mitigate health risks to viewers.

Wireless configuration

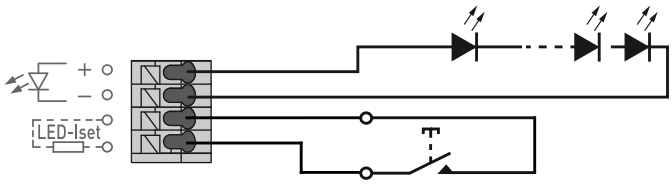
LL25SE-DA-120-500 LED driver is equipped with NFC wireless technology for effortless configuration of the driver via Helvar Driver Configurator Support. Helvar Driver Configurator enables easy-to-use automatic configuration of the driver parameters via NFC, without mains or DALI connection to the driver. The most popular MD-SIG qualified NFC readers (FEIG CPR30-USB & ISC. MR102-USB) are supported giving flexibility for the operator. For further information about the usage with Helvar Driver Configurator, please see the user guide at www.helvarcomponents.com



Feig NFC reader

Direct Control

LL25SE-DA-120-500 LED driver supports innovative Direct Control functionality, enabled in Helvar Driver Configurator. With Direct Control enabled (disabled as default), the user is able to control the light level via Iset / LED-Iset terminal with single switch (push to make), such as pull cord mechanism or local push button. This gives the unique possibility to implement luminaire-based control in the most simple manner. Direct Control follows the same operation logic as Switch-Control (more details on pages 5-6).



Connections and Mechanical Data

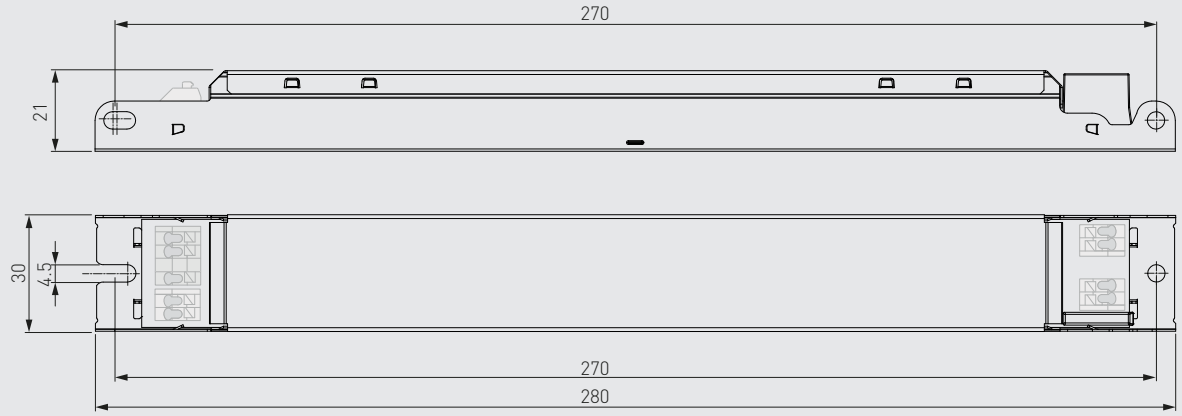
Wire size	0.5 mm² – 1.5 mm²
Wire type	Solid core and fine-stranded
Wire insulation	According to EN 60598
Maximum driver to LED wire length	1.5 m
Weight	197 g
IP rating	IP20

Connections

Note:

- *Earth connection to functional earth terminal is optional and not needed for the functionality of the driver. See page 4 for details.*
- *Not suitable for load side switching operation*
- *Label may differ if the unit is preset to fixed current*

Dimensions (mm)



The LED-Iset resistor/current setting values are adjusted according to the LEDset specification. The resistor value for each required output current can thus be calculated from the formula R [Ω] = (5 [V] / I_out [A]) * 1000. Below are the available LED-Iset resistors from Helvar Components, pre-adjusted for the most common output currents.

Helvar Components LED-Iset resistors and currents (Nominal I_{out} (±5 % tol.))

LED-Iset resistor model	MAX	475 mA	450 mA	425 mA	400 mA	375 mA	350 mA	325 mA	300 mA	275 mA	250 mA	225 mA	200 mA	150 mA	No resistor
I_{out} (mA)	500	475	450	425	400	375	350	325	300	275	250	225	200	150	120
Order code	T90000	T90475	T90450	T90425	T90400	T90375	T90350	T90325	T90300	T90275	T90250	T90225	T90200	T90150	N/A
Resistance values (Ω)	0	10.5k	11k	11.8k	12.4k	13.3k	14.3k	15.4k	16.5k	18.2k	20k	22.1k	24.9k	33.2k	∞

The current can be adjusted also with normal resistors by selecting suitable resistor value (formula R [Ω] = (5 [V] / I_out [A]) * 1000). Reference resistor values can be found below order code in the table above.

LL25SE-DA-120-500 LED driver is suited for built-in usage in luminaires. In order to have safe and reliable LED driver operation, the LED luminaires will need to comply with the relevant standards and regulations (e.g. IEC/EN 60598-1). The LED luminaire shall be designed to adequately protect the LED driver from dust, moisture and pollution. The luminaire manufacturer is responsible for the correct choice and installation of the LED drivers according to the application and product datasheets. Operating conditions of the LED drivers may never exceed the specifications as per the product datasheet.

Installation & operation

Maximum ambient and t_c temperature:

- For built-in components inside luminaires, the t_a ambient temperature range is a guideline given for the optimum operating environment. However, integrator must always ensure proper thermal management (i.e. mounting base of the driver, air flow etc.) so that the t_c point temperature does not exceed the t_c maximum limit in any circumstance.
- Reliable operation and lifetime is only guaranteed if the maximum t_c point temperature is not exceeded under the conditions of use.

Current setting resistor

LL25SE-DA-120-500 LED driver features a constant current output adjustable via current setting resistor.

- An external resistor can be inserted in to the current setting terminal, allowing the user to adjust the LED driver output current.
- When no external resistor is connected, then the LED drivers will operate at their default lowest current level.
- A standard through-hole resistor can be used for the current setting. To achieve the most accurate output current it is recommended to select a quality low tolerance resistor. Minimum diameter for resistor leg is 0.51mm.
- Always connect the current setting resistor only into the terminals marked with LED-Iset on the LED driver label.
- For the resistor/current values, refer to the table on page 4.

LED driver earthing

- LL25SE-DA-120-500 is LED driver suitable for Class I and II luminaires as well as driving Class III (SELV) luminaire parts in independent installation with external strain relief.
- When used inside **Class I and Class II** luminaires, the earth cable is recommended to be connected to improve the EMC performance of the driver, but it is not mandatory. It is the responsibility of the integrator to ensure that the assembled luminaire EMC performance complies with the latest standards.

Miniature Circuit Breakers (MCB)

- Type-C MCB's with trip characteristics in according to EN 60898 are recommended.
- Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Helvar Driver Configurator -support

LL25SE-DA-120-500 LED driver is supported by Helvar Driver configurator software. The LL25SE-DA-120-500 driver supports output current setting with software, the output current of the driver can be programmed using Helvar Driver Configurator, as well as OEM customer data and parameters for functions such as CLO. Programming the driver with Helvar Driver Configurator can be done either wirelessly via NFC or then via DALI bus. Also the operation of the multifunction LED-Iset terminal usage can be changed from current setting resistor (default) to NTC overtemperature protection operation or to Direct Control functionality.

Lamp failure functionality

No load

When open load is detected, driver will go to standby power consumption and remains in automatic recovery mode. In automatic recovery mode, the driver waits till load is returned and once that happens, it returns to normal operation.

Short circuit

When short circuit is detected, driver goes to automatic recovery mode and follows the same logic as described in the no load condition.

Overload

When overload is detected, driver goes to standby mode and returns through mains reset.

Underload

When undervoltage is detected, driver goes to standby mode and returns through mains reset.

NTC trigger

When NTC is enabled via Helvar Driver Configurator, driver follows NTC feature behaviour. Default NTC trigger point is 8,2 kΩ, after which the driver starts to decrease the output level.

Switch-Control 2 & Direct Control

Before installation and for troubleshoot and guidance, refer to Switch-Control & Direct Control User Guide at www.helvarcomponents.com.

Use of Switch-Control functionality

- Maximum numbers of LED drivers to be connected to one switch is 60. Wire length is not restricted by the driver technology.
- Ensure that all components connected to Switch-Control circuitry are mains rated.
- The X2 rated (1 µF) capacitor has to be installed between control lines incase of unwanted behavior of lights. See details and guidance from the user guide.

Use of Direct Control functionality

- Maximum one LED driver shall be connected to single switch through Direct Control.
- Maximum wire length between driver and the switch is 10 m.
- By default, Direct Control is disabled and LED-Iset terminal is used for current setting. When enabled through the Helvar Driver Configurator, the current is set by the software.
- With SELV60 drivers the Direct Control circuit is SELV60 circuit. The components can be rated accordingly.
- DALI usage not supported at the same time with Direct Control.

Conformity & standards
