

## MINI 22 mm Strain Relief Series

Product code: 5966xxx (see page 2)

- Innovative accessory, enables easy independent installation of plastic case MN22 Series LED drivers and looping of the input cables
- Easy installation with screwless cable clamps
- Sturdy structure, compatible with cables of different thickness

IEC Halogen free

## PACKAGE CONTENTS

One set of LC-SR-MN22-LOOP strain relief consists of the following parts:

- Cover part
- Bottom part
- Looping connector
- Two screwless push-to-fix cable clamps
- Four separate pre-cut wires for looping connector wiring inside the strain relief (*not preassembled*)

## DIMENSIONS

## MATERIALS AND CONDITIONS

### Material Specifications

Material type	Polycarbonate
Fire retardant	Yes
UV protected	No
Colour	White, RAL 9010
Halogen free according to	IEC 61249-2-21

### Mechanical, Operating & Storage Conditions

Driver cross-section dimensions	43 x 22 mm
Cable size:	Ø 3 - 11 mm
Wire size	0.5 - 2.5 mm <sup>2</sup>
Ambient temperature range	-25...+45 °C*
Storage temperature range	-40...+80 °C
Assembly temperature range	+5...+30 °C

Do not store in wet or humid environment!

\*Unless otherwise stated in the driver datasheet (for independent installation). Note! T<sub>c</sub> max temperature of the driver shall not be exceeded.

### Conformity & Standards

Luminaires - Part 1: General requirements and tests	IEC 60598-1 EN 60598-1
Luminaires. Part 2: Particular requirements. Section One: Fixed general purpose luminaires	IEC 60598-2-1 EN 60598-2-1

Compliant with relevant EU directives, CE/UKCA marked, RoHS/REACH compliant

LC-SR-MN22-LOOP strain reliefs enable the independent installation of certain Helvar Components plastic case compact MINI LED drivers. Please always take specific requirements into account before installing and using the strain reliefs.

## ORDER CODES

	Order code	Product name	What is included
LC-SR-MN22-LOOP			
Product order codes	5966300	LC-SR-MN22-LOOP-WIRED	Strain relief including 4 separate short cables for the looping connector ( <i>not pre-wired</i> )
	5966000	LC-SR-MN22-COMBO	LC-SR-MN22-LOOP-WIRED + LC-SR-MN22 strain reliefs in one package (input + output)

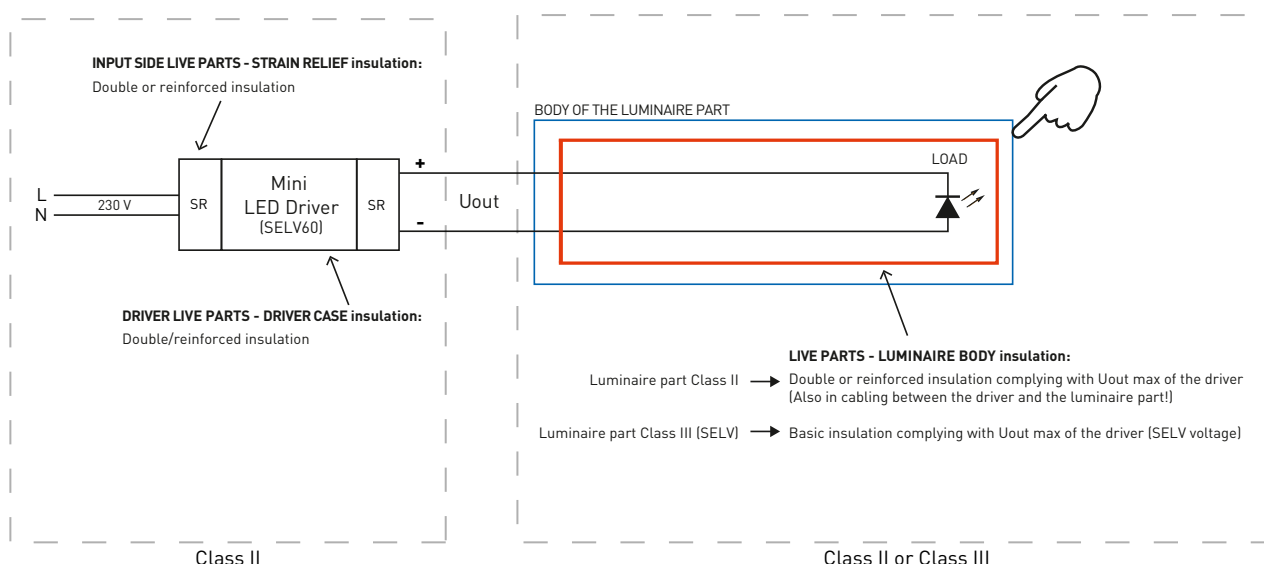

## Suitability for different Helvar Components LED drivers

### HELVAR COMPONENTS **LCXXMN22** SERIES (ON/OFF AND DALI)

The above mentioned Helvar Components compact LED drivers are Class II devices that have double or reinforced insulation between live electrical parts and accessible parts of the driver and no earthing terminal.

When installing above mentioned Helvar Components Class II drivers independently with LC-SR-MN22-LOOP strain reliefs, these drivers have isolated SELV output. The accessible parts of both the cabling and the luminaire part must have then basic isolated according to  $U_{out}$  max of the driver (SELV voltage). In addition to this, the operating conditions of the driver in independent installation may never exceed the specifications as per the product datasheet.

Required insulations illustrated in the figure below. It is always the integrator's responsibility to ensure that the combination of the driver and the luminaire part complies with the relevant safety standards (e.g. IEC / EN 60598-1).

**LIMITATION OF LIABILITY. ALWAYS CHECK AND FOLLOW EXACT REGULATIONS FROM LATEST RELEVANT IEC/EN STANDARDS.**

## Thermal considerations

The LC-SR-MN22-LOOP strain reliefs are designed and tested to comply with the luminaire standard EN 60598-1 where applicable. The luminaire, that is used with driver equipped with LC-SR-MN22-LOOP strain reliefs, is not allowed to be covered with thermally insulating material according to IEC 60598-1. When combining the strain reliefs and drivers for independent installation of the drivers, it is always the responsibility of the integrator to ensure that the combination complies with the relevant standards (e.g. IEC / EN 60598-1).

Thermal design of the luminaire system is important for the safety, reliability and lifetime of the system. Datasheets give guidelines what range of ambient temperature is recommended for the driver in built-in and in independent usage, but in both environments it is always the responsibility of the integrator to ensure that the Tc point temperature does not exceed the Tc max temperature specified in the product datasheet.

## Installation, mechanical and chemical considerations

The general preferred installation position of LED drivers for independent use is to have the top cover facing upwards. Minimum recommended installation distances of independent LED driver with strain reliefs below:

- Do not assemble the LC-SR-MN22-LOOP strain reliefs into place in cold environments (<5 °C)
- The protection class of the final installation must be adequate for the application
- While handling the strain reliefs avoid excess mechanical stress or pressure applied to them
- Avoid dropping of the strain reliefs
- Mechanical modifications (drilling, milling, sawing or cutting of the strain reliefs) are not permitted

Chemical substances may cause damage to the LC-SR-MN22-LOOP strain reliefs.

Avoid materials and substances containing:

- Acetone, ketones, ethers, and aromatic and chlorinated hydrocarbons
- Aqueous or alcoholic alkaline solutions, ammonia gas and its solutions and amines

Do not expose LC-SR-MN22-LOOP strain reliefs to steamy environments.
